

National Hydrocarbons Corporation

DEVELOPMENT CATALYST FOR CAMEROUN

SNH: More than forty years of

Profile

The National Hydrocarbons Corporation (SNH) is the 1st company in Central Africa in terms of turnover. SNH is a public company with a share capital of eight billion CFAF wholly owned by the State of Cameroon. It has legal personality and financial autonomy.

Created on 12th March 1980, SNH's mission is to manage the State's interests in the hydrocarbons sector. The Corporation is also empowered to carry out all financial operations, in conjunction with the Ministry of Finance.

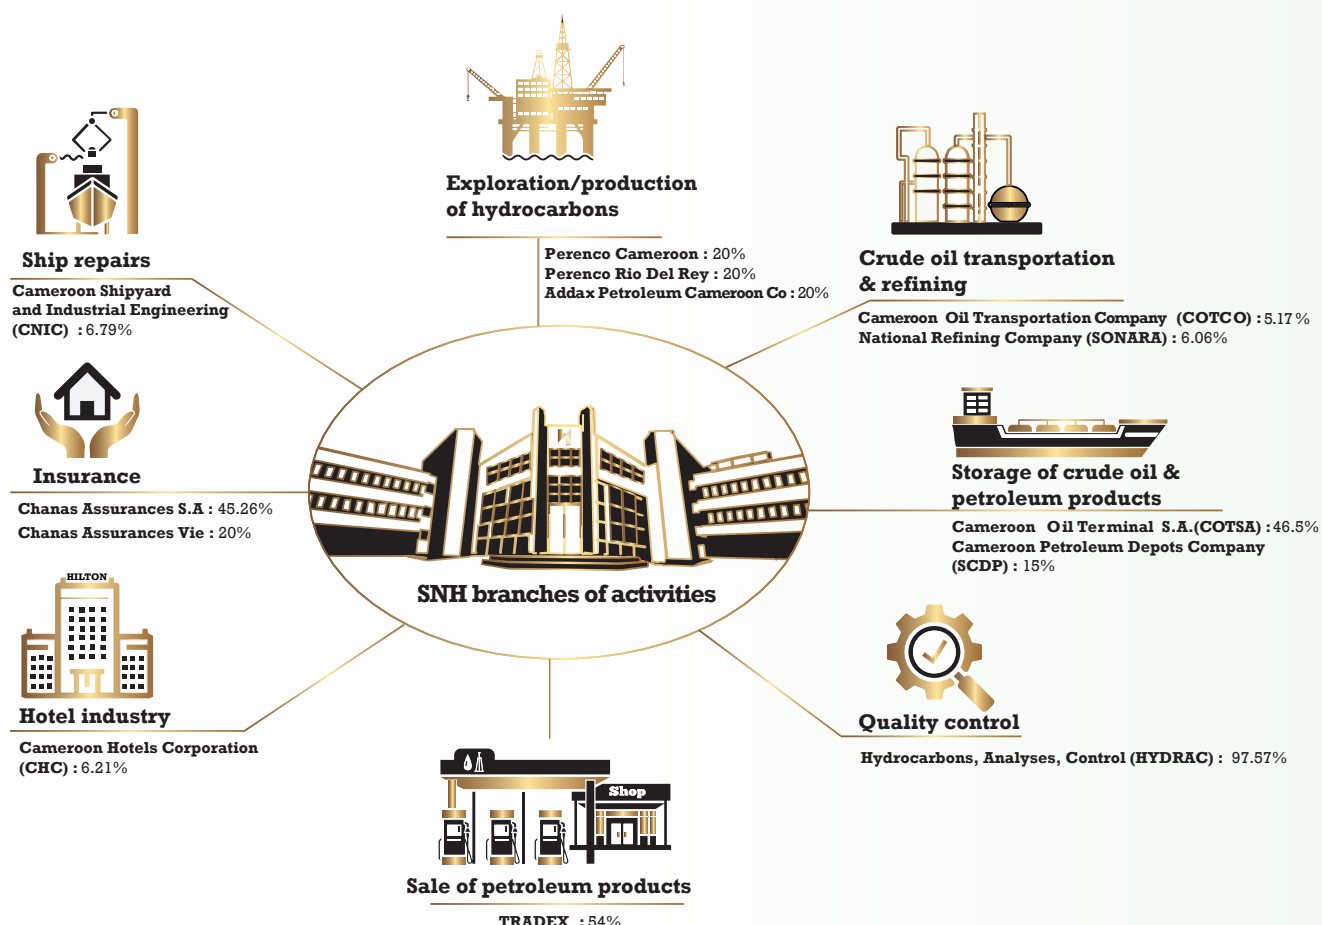

Activities:

- Promotion of the national oil and gas domain;
- Negotiation of oil and gas contracts, in conjunction with the competent public administrations;
- Monitoring the implementation of oil and gas contracts between the State and companies operating in the hydrocarbons sector;
- Exploitation of oil fields in association or sole risk;
- Monitoring of crude oil loading operations at terminals;
- Marketing the share of national hydrocarbons production accruing to the State;
- Implementation of gas projects aimed notably at increasing national electricity supply, in a bid to support the development of the industrial fabric;
- Management of security stocks of petroleum products to guarantee the country's supply in the event of a major unforeseen event;
- Transfer to the State, of income derived from the sale of hydrocarbons, after deducting costs, which finances the State budget;
- Conduct of studies and execution of various projects related to its missions in the oil, gas, para petroleum, as well as related sectors.

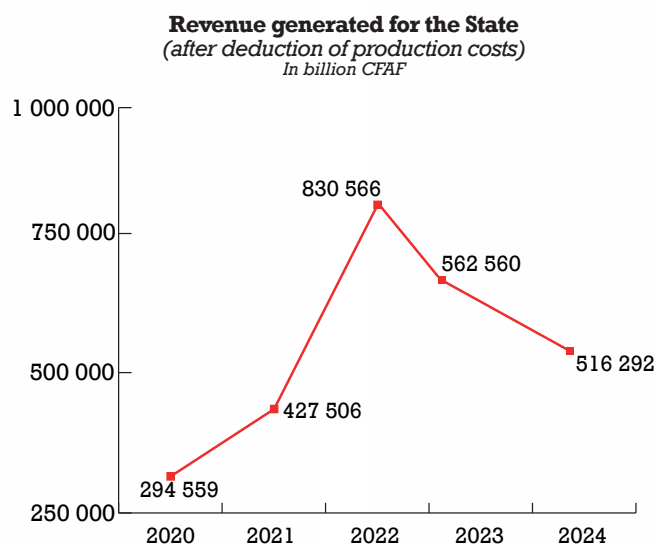

experience in the hydrocarbons sector

An expanding portfolio

As an expanding group, SNH has been diversifying its activities since 1994. Its portfolio includes 13 share companies operating in the petroleum, para-petroleum and related sectors.

A driving force for the national economy

Management based on principles of good governance

SNH is a key player in the Extractive Industries Transparency Initiative (EITI), and its work has been commended by the Initiative's International Secretariat.

The management of SNH is participatory and objective-oriented, following a guideline summarised in three watchwords:

- professionalism,
- integrity,
- sense of common interest.

Hydrocarbons, a sector

Historical Overview

Oil prospection began in Cameroon in 1947. The first commercial discoveries were made in the Rio del Rey basin in 1972, but it was not until 1977 that the country became an oil producer, with the first ton of oil produced from the Kole field.

Production reached the record level of 186 000 barrels/day in 1985. From 1986, year of the “oil price collapse”, it began to decline.

To remedy this situation, the government introduced incentives to boost exploration/production. Thanks to these measures and the efforts made by SNH to curb this decline, which was notably linked to ageing fields, a renewed interest of international oil companies in Cameroon’s mining domain was observed. As at 30 April 2025, about fifteen companies are active in the Upstream hydrocarbons sector.

As concerns natural gas, national production was launched in 2012. Thus, since 2018, Cameroon has been an exporter of liquefied natural gas (LNG).

In fact, gas resources, which remained for a long time on hold in the absence of a promising market, are now finding outlets through various projects conducted by SNH and subsidiaries of international companies.

Prospective sedimentary basins

There are two main types of sedimentary basins in the national oil and gas domain, which covers an area of 32 139.67 km². These basins belong to three active African petroleum systems, namely, Niger Delta, West African salt basins and Southern and Central African rifts. They include:

- the coastal sedimentary basins (Rio del Rey and Douala/Kribi-Campo), and
- intracratonic basins (Logone Birni, Mamfe and Garoua).

These basins are still under-explored.

Unlicensed blocks on promotion

Several unlicensed blocks are on promotion in the hydrocarbons rich Rio Del Rey (RDR) basin and the highly prospective Douala/Kribi-Campo Basin (DKC).

The Terms of Reference for proposals are available on the SNH website (www.snh.cm).

with great potential

Petroleum associations, at the heart of activities

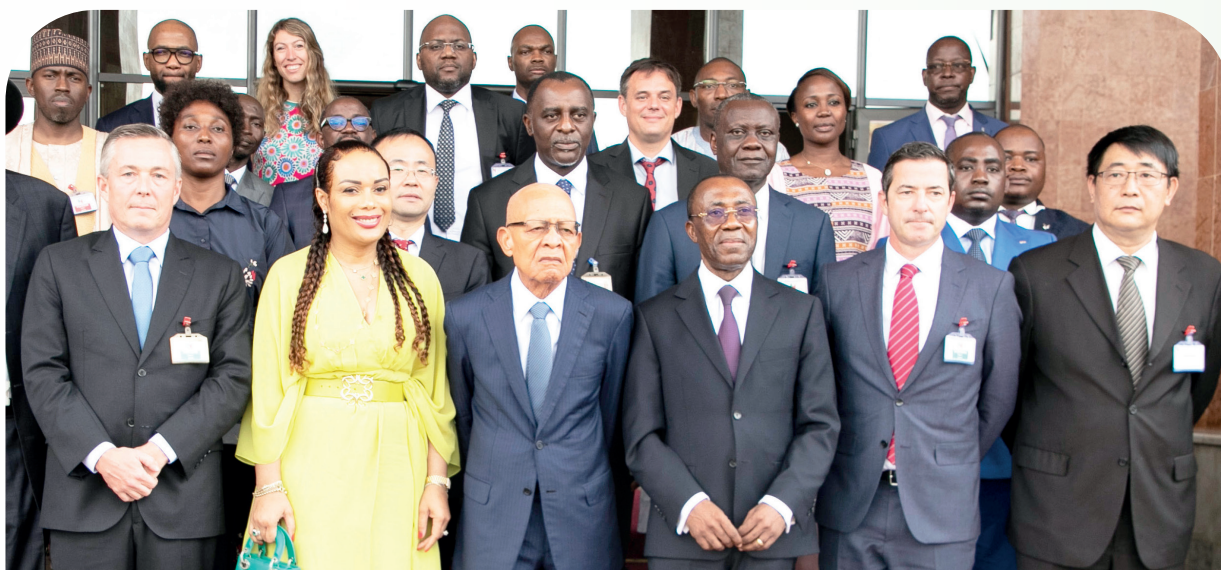

Exploration/production activities are conducted in the following sedimentary basins: Rio Del Rey (producing since 1977) and Douala/Kribi-Campo (producing since 1997).

Activities are carried out within the framework of investors associations comprising SNH, which is the State's Representative, and oil companies. In each association, one of the members, called operator, is appointed to conduct the activities on the field.

Reliable partners

SNH partners with various international oil companies, including subsidiaries of Golar, Sinopec, Grynberg, Noble Energy, Bowleven, Victoria Oil & Gas, New Age, Tower Resources, Afex, Yan Chang, Perenco, Keda Ceramics Ltd, Ariana Energy and RCG Consortium.

An attractive legislation

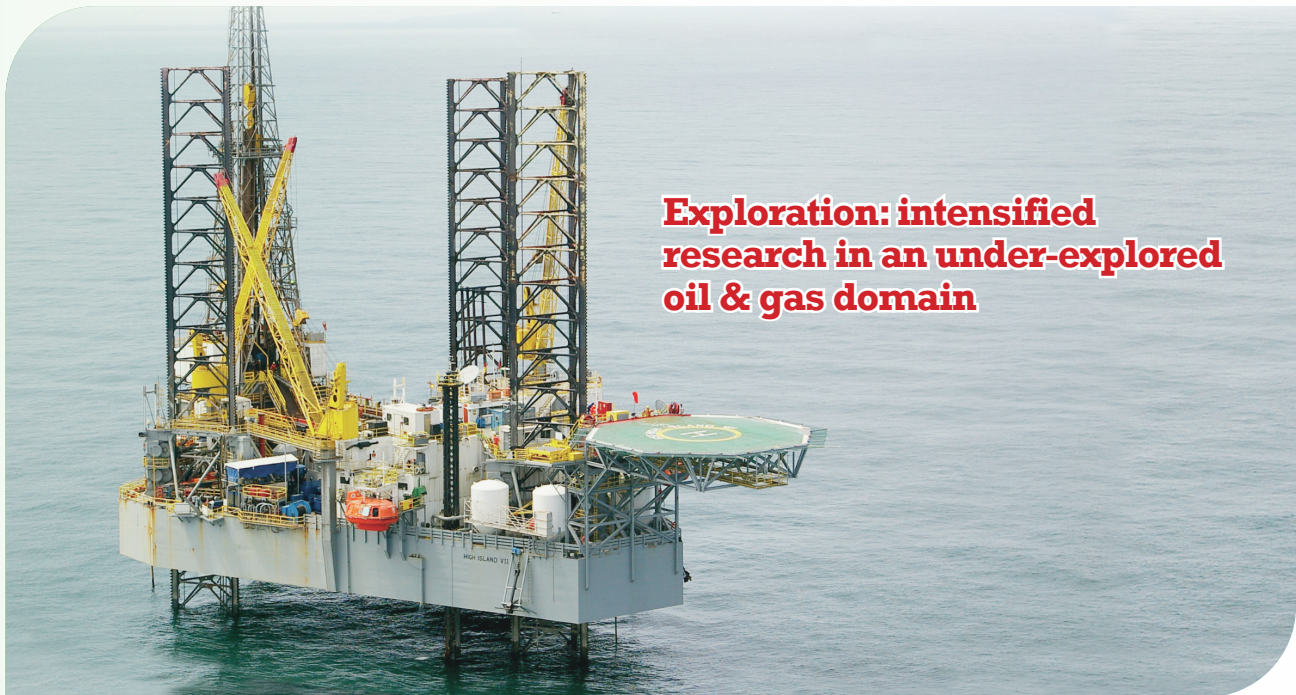

The Petroleum Code sets the terms and conditions for prospection, exploration, exploitation and transportation of hydrocarbons, and specifies the rights and obligations related to oil operations. The flexibility of the Petroleum Code gives room for the negotiation of three of the most recognised types of contracts in the industry: the Concession Contract (CC), the Production Sharing Contract (PSC) and the Risk Service Contract (RSC).

The Gas Code, which notably specifies the accounting, financial, tax and customs provisions applicable to activities related to the development of gas, provides for:

- the concession regime for transport and distribution activities;
- the license regime for processing, storage, import and export activities;
- the authorisation regime for the sale of gas, importation and installation of material and equipment intended for the commissioning of gas transportation and distribution networks, gas storage centres as well as measurement and safety equipment to be used by operators and customers.

The texts provide incentives to promote investments in the hydrocarbons sector.

Hydrocarbons, a sector

Exploration: intensified research in an under-explored oil & gas domain

A data repository at the disposal of operators

SNH has a Petroleum Information Centre (CIP), which is in charge of:

- collecting, managing and archiving data generated from the national oil & gas domain. The CIP provides data on wells (samples, various reports, logs), geophysical data (seismic, gravity, magnetometric) and various technical studies available on paper and electronic medium.
- mapping (generating updated and digitalised maps). The CIP's expertise is acknowledged nationwide and internationally. As such, it has provided maps to many oil operators, Cameroonian ministries and bilateral commissions.

An operational mapping portal

SNH has a mapping portal, known as GeoSNH. It is a software package for the storage, processing, analysis, search and sharing of geographic and map data.

SNH's mapping portal contains several types of digital and vector data, notably satellite images and images of map bases covering Cameroon's sedimentary basins. It enables to consult or generate maps enriched with administrative, environmental and socio-economic data.

GeoSNH also provides simple information such as location of a permit, a concession, a well or a field for instance, as well as visualisation of more detailed information such as distance measurement, surface area calculation or access to documents related to a well.

A Site for the storage of samples originating from oil and gas wells available

The Site is built on a surface area of more than 4000 m² in the outskirts of Douala. It receives samples since 2018. It allows for the compilation, in a single location and under adequate conditions, of Cameroon's heritage, notably samples from oil and gas wells, seismic data and well logs which can be analysed in order to improve knowledge of the prospective areas of Cameroon's oil and gas domain. In addition, services, including leasing of storage space, will also be offered to oil companies. A total of 385 cases containing 20,159 samples from 59 wellbores has been received at the SITE.

with great potential

Marketing : SNH's expertise acknowledged

SNH markets the share of national crude oil production accruing to the State, as well as its own production. SNH also sells Cameroonian crude oil on behalf of one of its partners, which testifies to the acknowledgement of its marketing expertise.

The reference crude oil for the sale of Cameroonian crude oil is Dated Brent, listed on the London Intercontinental Exchange.

Depending on the type of crude oil and market conditions, Cameroonian crudes are sold at a discount or premium to Brent.

SNH's marketing policy is based on two pillars: direct sales to refiners in its natural export zone (Europe, Mediterranean) and sales to traders, in order to reach either more distant markets (the Far East and the Americas) or new markets.

Conditions to be fulfilled for the purchase of crude oil

- Full address of the company
- Name and nationalities of the main shareholders as well as senior managers of the company
- Certified balance-sheets of the past three years
- Annual report of the past fiscal year
- Bank references (address, telex, fax, telephone) and contact persons in the banks.

Types of crude oil sold in Cameroon*

Kole (27.57° API) : 950 000 barrel cargoes

Lokele (23.12° API) : 650 000 barrel cargoes

Ebome (49.91° API) : 400 000 barrel cargoes

** Changing figures*

An FSO henceforth in the Rio Del Rey basin

SNH and its partners have acquired an FSO with a capacity of 1.87 million barrels, called Massongo. The FSO is managed by COTSA, a company incorporated under Cameroonian laws, owned 46.5% by SNH. The Massongo enables the optimisation of operational costs.

Hydrocarbons, a sector

Gas for the development of Cameroon

Cameroon's natural gas reserves are estimated at 169.256 billion cubic metres as at 30 April 2025. Various projects are being implemented in partnership with international companies, to develop these resources.

Gas supply for power generation

SNH and its partner Perenco, grouped under the Sanaga South Association, have put on production the natural gas reserves of Sanaga Sud field, which supply a thermal power plant constructed in the seaside town of Kribi, with a capacity of 216 MW. It is the very first gas-fired thermal power plant in Cameroon.

Gas supply to the power plant is ensured without incident by SNH since 2013, via a gas pipeline constructed and operated by the company. The volumes supplied fully meet the needs expressed by the plant operator for electricity generation. The power plant supplies the South Interconnected Grid which covers the Centre, South, Littoral, South-West, North-West and West regions.

Gas for industries

SNH supplies natural gas to Keda Cameroon Ceramics LTD's ceramic tile manufacturing plant. Initiated in January 2023 with the commencement of engineering work, the factory has an initial daily output of 50 000 square meters of tiles.

The constructed plant's gas requirements are estimated to be between 3.5 and 6.5 million cubic feet per day, equating to a 20-year potential of 36 billion cubic feet.

SNH has constructed a 5.27 km long pipeline originating from the Bipaga Natural Gas Treatment Centre, built by the company and its partner Perenco, who also operates it. This pipeline, managed by SNH, constitutes an investment close to 7.2 billion CFA francs.

The Logbaba Association, made up of SNH and its partner Gaz du Cameroun, has put on production the natural gas reserves of the eponymous field, located in the outskirts of the economic capital Douala, in order to supply industries in the Bassa and Bonaberi areas with clean energy, cheaper than fuel oil or diesel.

with great potential

Domestic gas for households

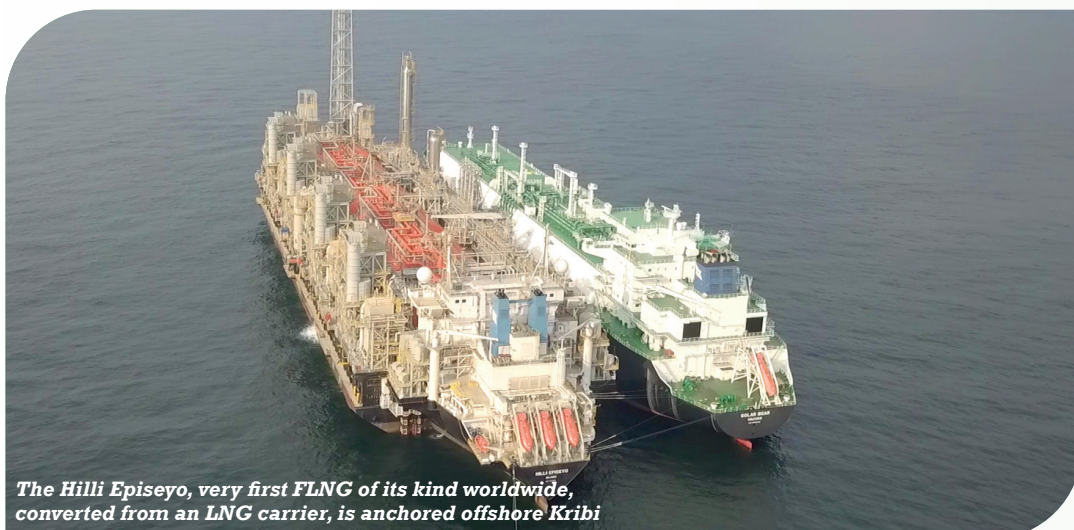

SNH commissioned a storage and loading depot for liquefied petroleum gas (LPG, commonly known as domestic gas) at Bipaga in 2018. It covers about 20% of the annual needs of Cameroonian households. The LPG is delivered in tankers to the marketers, who bottle it in cylinders.

Technological innovation opens the doors of the international gas market to Cameroon

Thanks to the commissioning of the Floating Liquefied Natural Gas (FLNG) project led by SNH and its partners Perenco and Golar, Cameroon acquired the status of natural gas exporting country in 2018. Gas from the Sanaga Sud field is liquefied on a floating facility installed offshore Kribi, for a production of 1.4 million tons of liquefied natural gas (LNG) per year. Concurrently, 1.8 million barrels of very light oil called condensate, intended for refinery, is produced.

A second project is underway to develop the Yoyo/Yolanda cross-border gas field in partnership with Chevron and the government of Equatorial Guinea.

The Hilli Episeyo, very first FLNG of its kind worldwide, converted from an LNG carrier, is anchored offshore Kribi

SNH, a key player in

Environmental protection

SNH ensures strict compliance with legal provisions in this domain. Therefore, all activities carried out by the company and its partners in the exploration and production of hydrocarbons are subject to a prior environmental impact assessment, which presents in particular the incidence of such activities on the environment and the mitigating measures envisaged for the preservation of the ecosystem balance.

Moreover, SNH implements a National Oil Spill Contingency Plan, through the Pipeline Steering and Monitoring Committee. SNH's

commitment to environmental protection is also reflected in its involvement in international initiatives. Thus, the company strives to reduce the amount of gas flared on oil platforms and released into the atmosphere. To this end, SNH signed a partnership agreement with the World Bank, on the funding of the Global Gas Flaring Reduction Partnership (GGFR). Moreover, SNH is a member of the International Petroleum Industry Environmental Conservation Association (IPIECA) and the International Oil Pollution Compensation Funds (IOPC Funds).

Support to sport

SNH, which is one of the major sponsors of Cameroon's cycling, has contributed to the revival of this activity in the country. Similarly, the company participates in the development of golf, by sponsoring competitions organised in this discipline.

Standing by its employees

SNH endeavours to create a working environment in which employees have the necessary skills and tools to enable them to effectively carry out their work in pleasant and secure conditions, so that they can return home safe and sound at the end of the workday.

Thus, SNH has set up a Commission for Occupational Health and Safety (CSST) and a Fire Safety Unit (CSI), tasked with informing the staff and developing their skills regarding occupational health and safety measures.

The staff also benefit from a range of facilities intended to foster their physical and intellectual well-being. These include the Hydrocarbons Sports and Cultural Association (ASCH) and the Solidarity Fund of the SNH Group staff. In addition, a Social Fund guarantees a retirement gratuity to retired staff.

sustainable development

Youth training

For many decades, SNH has contributed to youth training by supplying books to libraries and multi-media centers of secondary schools in Cameroon.

This has had very positive effects in rural areas in particular, where the low purchasing power does not permit students to have books, including textbooks.

Moreover, the company contributes to the professionalisation of teaching in the oil sector. In this re-

gard, it has put in place a computerised petroleum geosciences laboratory in the University of Douala, in partnership with the Schlumberger oil service company, at a initial cost of about 1.5 billion CFAF. SNH is conducting a project to extend this experience to various academic institutions in Kaele, Meiganga, Yaoundé, Douala, Dschang, Bamenda and Buea cities.

Infrastructure development

SNH has installed water points and built or rehabilitated roads in areas where oil operations are conducted.

Support for the preservation of cultural heritage

SNH's civic commitment is also reflected in its sponsorship of various initiatives in the area of culture, notably the heritage festivals organised in Cameroon, including Ngondo, Nguon, Mayi and Festi Kudumbar.
